CONTRIBUTION TO GRAIN SIZE DETERMINATION THROUGH SEDIMENTATION ANALYSIS, IN THE EQUIVALENT DIAMETER RANGE OF 0.1 TO 10 MICRON. Sep 60, 13p. 17 refs.
Order from SLA mi\$2.40, ph\$3.30

61-10215

Trans. of Kolloid Zeitschrift (West Germany) 1960, v. 169, no. 1/2, p. 34-41.

An automatic sedimentation scale is described, where a closed cylinder is immersed in the suspension to be analyzed. It is equipped with a diagram recorder which draws a cumulative sedimentation curve in the form of a stepped curve. The sedimenting material itself repeatedly reduces the paper speed of the diagram strip in such a way during settlement, that a simple graphic evaluation with high accuracy is possible. The apparatus permits carrying out grain distribution analyses in a range from 0.1 to 10 μ .
